

## Miscellanea Geographica. Regional Studies on Development

Call for Papers

Thematic Issue: AIGeoHumanities. “*Advancing Intelligent Geography in the Humanities: Geospatial AI, GIS, Immersive and Remote Sensing*”

Guest Editors:

**Vitor Ribeiro (University of Minho)**

**Juliana Alves (University of Minho) and**

**Izabela Karsznia (University of Warsaw)**

<https://reference-global.com/journal/MGRSD>

This special issue, guided by the theme “*Advancing Intelligent Geography in the Humanities: Geospatial AI, GIS, and Remote Sensing (AIGeoHumanities)*” seeks to explore how emerging technologies are transforming spatially oriented research in the humanities and supporting more informed decision-making in complex systems.

We welcome contributions that examine the application of geospatial technologies within humanities research, including but not limited to Geographic Information Systems (GIS), geospatial artificial intelligence (GeoAI), remote sensing, deep mapping, digital archives, and immersive technologies.

These perspectives demonstrate how spatial thinking, combined with advanced computational tools, can deepen our understanding of places, histories, and human experiences. Collectively, they highlight the growing relevance of the spatial humanities in bridging disciplinary boundaries, generating new narratives, and reshaping how we investigate and interpret the world.

We invite original research articles, in-depth case studies, and methodological contributions from scholars worldwide.

### **Important information**

**Deadline for submissions:** January 31st, 2027.

**Please see submission guidelines:** <https://reference-global.com/journal/MGRSD?tab=submission-guidelines#journal-tabs>

**Submissions should be sent to:** [www.editorialmanager.com/mgrsd](http://www.editorialmanager.com/mgrsd)
